

OUR USABILITY LAB HAS THE FOLLOWING CAPABILITIES:

- » Usability setup includes 2 monitors in the viewing room with PIP output - the PIP with audio can also be viewed on an additional TV in the client lounge.
- » Tested and proven HDMI Elmo camera that can be used for the participant's face.
- » IPEVO camera using HDMI output to capture user devices such as smartphones and tablets.
- » Adapters, converters, on-site tech support available.
- » HD Recording
- » The UX lab is capable of a quad split screen. We can hook up any device (smartphone, tablet, laptop) that has a HDMI input/USB port (this is actually what the video is demonstrating is the quad split screen).

Want to see how our usability lab works? Check out the link below for a sample session!
